

ComTec Cloud Battlecard

iConnectEDU

Next generation education communication tools start with the iConnectEDU platform. This Unified Communications platform is specifically tailored to the needs of schools and campuses for advanced forms of notification. In addition, the add-on ALERT licenses equip your facility with cloud-based technology that can help your school better communicate with parents, teachers, and students.

These Advanced Layered Emergency Response Tools or ALERT licenses allow you to have a sole source for monitoring events and controlling the messaging from an easy to use portal. In the event of an emergency, you have easy access to initiate a lock down and communicate simultaneously via signage, access control, screen pops and mobile application push notifications. If safety, security, and mass notification is a top priority, then the iConnectEDU platform is the perfect choice.

Benefits

Telecom System and Mass Notification all in one solution.

- Can replace parent teacher and school notifications for real time communication
- School delays and closing can be immediately delivered to apps
- School updates for events and special meetings can be delivered in real-time
- Single click mass notification and event management platform
- Reuse your existing infrastructure
- Cloud-based and scalable
- No usage fees
